

# Oil Industry - Handy Conversion Information

---

Crude petroleum, and the refined products made from crude oil, are normally measured either by volume in gallons and US barrels, or by weight in tons or tonnes. The relationship between volume and weight is usually measured by density in the United Kingdom (the alternative measure is relative density or specific gravity). American oilmen usually reckon quantities of oil produced, moved or processed in barrels per day (bpd or b/d). The loose but simple rule of thumb for conversion is that a barrel a day is roughly 50 tonnes a year, but the relationship varies according to density and so according to product.

## CONVERSION FACTORS FOR OIL

Product	At 86°F (30°C)			
	Liters per E.Ton	Liters per M.Ton	A.Gallons per M.Ton	A.Barrels per M.Ton

1 kg of LPG	= 47.0 cubic feet of natural gas
1 normal cu.m. per day (Nm <sup>3</sup> /d) [flow rate of gas]	= 37.33 standard cu.ft. per day (SCFD)
1 ton of LNG (LNG conversions)	= 1.14 1.4 x 10 <sup>3</sup> normal cu.m.natural gas (Nm <sup>3</sup> ) = 52.3 x 10 <sup>3</sup> standard cubic feet natural gas (SCF) = 55.0 x 10 <sup>9</sup> joules (HHV)
1 ton of LNG (energy equivalents)	= 1.22 tonne crude oil = 0.80 tonne heavy fuel oil = 0.91 tonne LPG (commercial composition) = 1.91 tonne coal
1 barrel per day (b/d)	= 50 tonnes per year (approx.)
1 barrel of oil equivalent	= 1 barrel of crude oil = 5,487 cubic feet of gas *

# Oil Industry - Handy Conversion Information

---

\* Natural gas is converted to barrels of oil equivalent using a ratio of 5,487 cubic feet of natural gas per one barrel of crude oil. This ratio is based on the actual average equivalent energy content of TOTAL's natural gas reserves.

1 barrel of crude oil per day = appr. 50 tons of crude oil per year  
1 ton of crude oil = 1 metric ton of crude oil  
= appr. 7.3 barrels of crude oil (assuming a specific gravity of 33 API)  
= 6.6-8.0 bbl. of crude oil with 7.333 bbl. taken as average  
= 1.16 kl. of crude oil (average)  
1 ton of oil equivalent = appr. 1,125 cubic meters of natural gas

## INTERFUEL CONVERSION FACTOR

Whilst individual crudes, coals and gases vary widely in quality, certain standard qualities are often assumed for statistical purposes:

Reference Fuel	Barrel Oil Equivalent	Ton Oil Equivalent	Ton Coal Equivalent	1,000 Cubic Feet Natural Gas
Calorific Value	5.8x10 <sup>6</sup> Btu gross	43x10 <sup>6</sup> Btu gross	7x10 <sup>6</sup> Kcal net	1x10 <sup>6</sup> Btu gross
Conversion Factors	1 7.41 4.71 0.17	0.14 1 0.64 0.02	0.21 1.57 1 0.04	5.8 43.0 27.3 1

Based on these qualities, the following equivalent rates of consumption can be used with reasonable accuracy:

LNG t/y	NG 10 <sup>6</sup> mmcF/d 10 <sup>9</sup> Nm <sup>3</sup> /y	OIL toe/y	OIL boe/y	COAL tce/y
1	1.41	1.22	25	1.9
0.71	1	0.87	18	39
0.82	1.15	1	20	1.55
0.04	0.056	0.049	1	0.076
0.53	0.74	0.64	13	1

## CALORIFIC VALUE

1 megajoule/cu m	= 25.84 Btu/cu ft
1 megajoule per normal cubic meter	= 25.368 BTU per standard cubic feet (BTU/SCF)
	= 2.388 x 10 <sup>2</sup> kilocalorie per normal cubic meter (kcal/Nm <sup>3</sup> )
1 kilocalorie/cu m	= 0.016 Btu/cu ft
1 megajoule/kg	= 429.9 Btu/pound
1 kilocalorie	= 1.8 Btu/pound (exact)
1 Btu/cu ft	= 37.38 kilojoules/cu m
	= 9.410 kilocalories/cu m
1 Btu/pound	= 2.326 kilojoules/kg
	= 0.556 kilocalories/kg

coal: bituminous	13,000
anthracite	14,500
oil: fuel	18,500
gas	19,500

---

## NATURAL GAS AND OTHER ENERGY EQUIVALENTS

The following are quick-reference equivalents. All figures are APPROXIMATE VALUES only for use where precision is not required. They are based on:

- (i) for natural gas:  
1,000 Btu/ft<sup>3</sup> = 9,500 kcal/m<sup>3</sup> (Groningen gas 8,400 kcal/m<sup>3</sup>)
- (ii) for LPG:  
an assumed 50/50 propane/butane mixture with (r) or (p) indicating that the LPG is either refrigerated or pressurised.
- (iii) calorific values, MMBtu (gross):
  - per tonne - LNG 51.8; LPG 47.3; oil 42.3; coal 27.3
  - per barrel - LNG 3.8; LPG (r) 4.45; LPG (p) 4.1; oil 5.8
  - per cubic metre - LNG 23.8; LPG (r) 28; LPG (p) 25.8

## Oil Industry - Handy Conversion Information

---

Rich Gas = natural gas having a gross calorific value of 41,868 kJ/m<sup>3</sup>. This term is used particularly for the natural gas from the North Sea and from Algeria.

Degree-days = the number of degree-days of a day is calculated on the basis of a reference temperature set by experience at 16.5 C; it gives the difference between that reference temperature and the daily mean temperature if the latter is the lower.

The number of degree-days of a year is the sum of the degree-days registered for each day of that year.

G-factor = invoicing factor representing the average monthly cost of natural gas at the Belgian border in francs per gigajoule.
